

Project Manager – Life Science Automation

Do you want to be at the forefront of implementing future full-automatic laboratory setups?

Flow Robotics A/S is a scale-up company experiencing strong growth internationally. As a spin-out from the IT University of Copenhagen, the company's vision is to revolutionize liquid handling automation in the life science and public health sectors.

The technology behind Flow Robotics liquid handling robot, flowbot ONE, enables user-friendly automation of various pipetting tasks. Our robots are already making a difference, for example in assisting professionals working to combat the COVID-19 pandemic.

“The robots help us in a situation, where we are in need of more bio analysts, and they help us taking care of our employees, so that they don't get overburdened and get strain injuries.”

- Section Chief at Hvidovre Hospital

We are now looking for a Project Manager who can support new business opportunities.

WE OFFER

Are you proactive and would you like to integrate the technology of the future? Are you motivated by working with both new technology and people? If yes, this is a unique opportunity to take on a challenging position in a growing and dynamic company.

When a lab technician aspirates liquid using a pipette and dispenses the liquid again, it can wear out their arms, hands and wrists. Therefore, automation is gaining importance in life science laboratories, where robots are increasingly applied for tasks such as liquid handling. Today, there are still uncovered potentials within full-automatic laboratory setups. As our new project manager, your job will be to discover these potentials taking a step towards a new strategic direction for Flow Robotics to fit into fully automated laboratory setups in order to ensure precision in the lab, taking away potential for human error and greatly increasing repeatability.

The focus is on the integration between Flowbot ONE and the rest of the fully automatic setup, which includes both integration between hardware and software, and ensuring the cooperation between the various actors. Thus, it must be expected that a certain amount of development work will be needed to make Flowbot ONE fit well into such a fully automatic setup, close collaboration with external collaborators, suppliers and the rest of Flow Robotics' development team will therefore be key.

By successfully piloting a project and / or successfully creating a concept where Flowbot ONE can fit into fully automation projects, it will be possible to become responsible for this section of the development department.

WE ARE LOOKING FOR

As a person – and a project manager – you have the ability to motivate project team members and work across the entire organisation, stay on top of the project plan and spot risks as well as opportunities that drive the project forward within the scope. And with a strong drive and great communication skills, you are ready to present the projects and give project status to management and the customer, so we all stay on the same agenda.

You are energetic, quality focused, able to prioritize, professional and able to deliver results in a dynamic and sometimes hectic environment. Your background is within automation and/or life science, but you have a broad interest in supporting the business and growth potential of the company. Furthermore, you are looking forward to being part of a team that has big ambitions and wants to take the company to the next level.

To succeed in this role, you need to have at least five years of experience within project management, stakeholder management, budgeting and technical concept description - preferably within automation and/or life science. You lead your projects and team in a holistic way to ensure that Flow Robotics are seen as a proactive and competent partner in the eyes of both our partners and customers.

ABOUT US

At Flow Robotics, our ambitions are global, business is expanding, and this is an opportunity to join an exciting company with international growth potential. On this journey, we need the most driven and capable people on board. You will join 30 colleagues that share the same ambition and optimism about the future, shaping the company as we expand. If you relish the opportunity to really shape the culture and atmosphere of our organisation, now is the perfect time to join.

As Project Manager you will be working in our HQ in Copenhagen, collaborating with the development-, sales- and marketing department reporting to the CTO Steen Vester.

IS IT YOU WE ARE LOOKING FOR?

The hiring process is carried out in collaboration with Brinch & Partners. If you would like to know more about this opportunity, please contact Partner Martin Bo Sørensen at +45 27847406 or read more at www.flow-robotics.com

We look forward to hearing from you.
